April 2024 “AI and End-Time Prophecy”

Dear Friend,

A friend of mine who retired from the United States government as an intelligence analyst occasionally sends me his observations pertaining to world events. He recently shared some very compelling insight about artificial intelligence. With his permission, I am passing along what he wrote. I will follow that with some observations of my own concerning end-time prophecy.

* * * * *

2024—YEAR OF CHALLENGES: THE ELUSIVE QUEST FOR TRUTH IN AN AGE OF DEEPPAKES

“Pilate said to him [Jesus], ‘What is truth?’”

John 18:38

“One leading AI [artificial intelligence] architect told us that in private tests, they can no longer distinguish fake from real—which they never thought would be possible so soon... This technology will be available to everyone, including bad international actors, as soon as early 2024.”

Joe Allen¹

“America, Britain, India and more than 60 other countries will hold national elections in the coming year. More people will vote—an estimated two billion—than at any other time in history. And as they head to the polls, they’re set to be targeted with an equally unprecedented barrage of AI-generated fake news ... if urgent action isn’t taken, democracy could be derailed by deepfakery.”

Rhys Blakely²

Welcome to 2024!

In the year ahead, *Truth* will become a perishing commodity at home and around the globe. Just like in the days of Stalin’s U.S.S.R. or Mao’s China, we are increasingly forced to read between the lines of official statements, statistics, or media headlines to sift out reliable information. The age of fabricated truth to serve personal, political, economic, and institutional agendas is upon us. Take for example, a seemingly innocuous recent article on megacorporation *Google’s* newly released *Gemini* chatbox (designed to one-up *Open-AI* and *Microsoft’s ChatGPT*), quoting CEO Sundar Pichai. Pay attention to this statement by the author: “the web and its critical search layer are changing. We can see it happening: Social media apps, short-form video, and generative AI are challenging our outdated ideas of what it means to find information online. **Quality information online.**”³ (Emphasis mine).

In other words, in today’s informational world there is no place to find *reliable* (quality) information. In my words, no place to find the truth. Why? Because virtually all of today’s information flows run through shaded prisms of truth which lie in turn, at least in the world’s way of thinking, in the eye of the beholder.

Look at today’s pre-election political realm. Almost half the country (and perhaps more) no longer can rely on the validity of the electoral system, the information provided by the government or the various platforms conveying that information, or the statements or statistics provided by the economic elites on Wall Street. Simply put, we no longer know who to trust.

Part of the problem is the mushrooming use of *deepfakes*.⁴ What are they? To create a *deepfake*, an AI system is trained on an individual's facial expressions and unusual vocal inflections. An abundant number of whiz kids and technicians-for-hire—in both political parties and, this year, perhaps a third-party candidate as well—feed an AI program with as many images of the targeted individual as he or she can gather, or as many voice recordings. With enough data, the system can emulate that person on demand. *DeepFaceLab* is among the most advanced software for creating audio/visual clones, but there are many others.

Two days before the New Hampshire primary, for example, a robocall likely using AI voice cloning technology—impersonating President Biden—widely broadcast a message to discourage Democrats from heading to the polls. It was merely one of the most recent examples of *deepfakes* in U.S. politics; similar efforts to disrupt elections in Slovakia and Taiwan have also occurred.⁵ Last summer, the Ron DeSantis campaign famously used a *deepfake* of Donald Trump embracing Anthony Fauci. A few months later, the Trump campaign created a “goofball ad” where digitized GOP candidates introduced themselves as “Ron DeSanctus” from “High Heels University” and Nikki “Bird Brain” Haley from the “Bush War Crime Institute.”⁶ The subtlety of the parody was lost on many observers.

It goes on and on.

And, unfortunately, will continue to do so until the 2024 U.S. Presidential Election, still over ten months away.⁷

It is becoming harder to tell the real from the manipulated. Reportedly, 7.6 million *Facebook* users were recently exposed to a disinformation campaign (believed to be run previously by a Kremlin-linked group), that paired images of celebrities like Taylor Swift and Cristiano Ronaldo with fake anti-Ukraine quotes.⁸

Of course, we all know the news that really matters is if Taylor Swift returns from her concert tour in time to watch Travis Kelsey in the Super Bowl. (She did. The Chiefs won. *Yahoo!*) But even in the world of celebrities, the failure to ascertain truth has ramifications: the recent flood of unapproved AI-enhanced nude images of Taylor Swift incurred the ire of millions of young “swifties.”

But back to my point that the failure to determine truth is going to have a huge political impact. In pre-election Great Britain, for example, a recent BBC audience watched a clip featuring a female network commentator reporting how Prime Minister Rishi Sunak was ensnared in a financial scandal after earning “colossal sums” pilfered from a fund to benefit ordinary Britons. The problem: none of it was true.⁹

In Pakistan, where the recent election was a disaster for the military-backed party in power, the opposing presidential candidate used AI to make speeches—from jail!¹⁰

Or take the case of Indonesia—the 18,000-island-archipelago that is home to the world's largest Muslim population—where a presidential election takes place in mid-February, with over 200 million expected to vote. All 18 major candidates, in a country with one of world's highest internet usage rates, are using *TikTok* (which became the second most popular source of information for the Indonesian populace during the campaign) to run ads supporting the candidates, sometimes with surprising results. Most recently, for example, a three-minute video featuring the voice and picture of long dead General Suharto (who died in 2008 at age 86 and ruled the country with an iron fist for three decades) racked up almost 5 million views on *X* and spread to *TikTok*, *Facebook* and *YouTube*. The video was an AI-generated *deepfake*, created using tools that cloned Suharto's face and voice, ostensibly to bolster support for the frontrunner, former army general Prabowo Subianto (also a former son-in-law). As one Indonesian remarked on-line: “that is the state of our country today—bringing dead dictators back to life to fool and scare us into votes.”¹¹

We are not that far behind.

Such developments raised a red flag at the recently concluded World Economic Forum (WEF) in Davos, Switzerland, where the global elites tell the rest of us how we should live and think. Participants were told that the number one global threat was *not* the Middle East, the Ukraine, or climate change, but rather **disinformation**,¹² particularly as the 2024 U.S. presidential elections approach. (These are the same educated elites, by the way, who held their deliberations in a room displaying the Walthamstow Tapestry,

known in some circles as the “satanic tapestry,” a large mural created in 2009 by a cross-dressing contemporary artist, where a person’s life is shown from infancy to its bloody end in the mouth of the devil.)¹³ As my wife Imogene is fond of saying, “you can’t make this stuff up!”

Like Pontius Pilate in Jerusalem, we are surrounded by untruth everywhere around us and cannot recognize the *real*/truth—the Lord Jesus Christ himself—should He be standing in front of us.

Who is dictating the new pseudo-truth? One author identifies these companies, among others, as the driving force of today’s “authoritarian technocracy”: *YouTube* (owned by *Google*), *Instagram* (owned by *Meta*), and *X* (formerly Elon Musk’s *Twitter*). What are their common beliefs: “That technological progress of any kind is unreservedly and inherently good; that you should always build it, simply because you can; that frictionless information flow is the highest value regardless of the information’s quality (*i.e. truth*); that privacy is an archaic concept; that we should welcome the day when machine intelligence passes our own. And, above all, that their power should be unconstrained.”¹⁴

Alas! Be not dismayed. This week, the leading artificial intelligence companies (*Google*, *Microsoft*, *OpenAI*, *Meta*, *TikTok* and *Adobe*) announced a plan to “sign” an accord committing to developing tech to identify, label and control AI-generated images, videos, and audio recordings that aim to deceive voters ahead of crucial elections in multiple countries this year.¹⁵ I know that makes me feel much better and totally confident that there will be no political partisanship shown in any such decisions.

Not!

Deepfakes are just one symptom of an environment that has a diminishing value for truth. Such AI-generated images have been around for several years, but in the past year they have rapidly improved in quality. So much so, in fact, that today’s fake videos, images and audio recordings are difficult to distinguish from real ones. As a result, we are now standing at the doorstep of pervasive digital delusion—or what Patrick Wood calls the “collapse of reality” and Shane Cashman calls “post-reality”—with people wallowing in fake worlds populated with fake people. In this increasingly chaotic meme storm, corporations (such as the future megacorporation *SINCOM* which I depict in *Prawnocos Rising*) and governments will seize more and more control over public narratives.¹⁶

Don’t take my word for it. Ask a machine. In the words of a “chatbox” asked to speculate on political developments in 2024: “Bots and fake accounts can be used to spread propaganda, amplify certain narratives, and silence opposing voices. *Deepfakes*, manipulated videos or audio recordings, can further blur the lines between truth and fiction.”¹⁷

Outside the political realm, this reliance on algorithms and AI math-based simulations as a modern substitute for truth, can have real-world consequences. For example, a new study funded by the U.S. military¹⁸ examining how AI can be used in foreign policy decision-making, found how quickly the tech would call for war instead of finding peaceful resolutions. Some AI in the study even launched nuclear warfare—all models show “signs of sudden and hard-to-predict escalations”—with little to no warning, giving strange explanations for doing so.¹⁹ And if you don’t think AI-enhanced machines are dramatically changing today’s battlefield and diplomatic calculations, you haven’t paid much attention to what is happening in the Ukraine, Middle East, or South China Sea.

So, what is to be done? Simply, in these difficult times, turn to Jesus Christ, the embodiment of truth. As I remind the listeners at the end of each of my podcast appearances: God is still in control and not shaking nervously on His throne.

In an extraordinary passage by the Apostle Paul in his epistle to the Romans, Paul writes about how Gentiles—even without the law—have a *conscience* bearing witness to the truth of God’s reality.²⁰ Many of today’s leading scientists, however, eager to counterfeit everything God has created, assert that conscience and consciousness are actually a quantum wave process that passes through microtubules (a complex lattice of proteins in the brain) with properties like *superposition* (the ability to be many places at the same time) and *entanglement* (the potential for two particles that are very far away to be connected).²¹

But I still believe God created mankind with a conscience “filter” to see, hear, and know truth as needed.

All this reminds me of a futuristic prediction by Yuval Noah Harari that I read many years ago: “In the twenty-first century we will create more powerful fictions and more totalitarian religions than in any previous era. With the help of biotechnology and computer algorithms these religions will not only control our minute-by-minute existence, but will be able to shape our bodies, brains, and minds, and to create entire virtual worlds complete with hells and heavens. **Being able to distinguish fiction from reality and religion from science will therefore become more difficult but more vital than ever before.**”²²

It will indeed ...

* * * * *

With this in mind, consider what the Apostle John wrote in Revelation 13:1-15,

And I stood upon the sand of the sea, and saw a beast rise up out of the sea, having seven heads and ten horns, and upon his horns ten crowns, and upon his heads the name of blasphemy. And the beast which I saw was like unto a leopard, and his feet were as the feet of a bear, and his mouth as the mouth

of a lion: and the dragon gave him his power, and his seat, and great authority.

And I saw one of his heads as it were wounded to death; and his deadly wound was healed: and all the world wondered after the beast. And they worshipped the dragon which gave power unto the beast: and they worshipped the beast, saying, Who is like unto the beast? who is able to make war with him?

And there was given unto him a mouth speaking great things and blasphemies; and power was given unto him to continue forty and two months. And he opened his mouth in blasphemy against God, to blaspheme his name, and his tabernacle, and them that dwell in heaven.

And it was given unto him to make war with the saints, and to overcome them: and power was given him over all kindreds, and tongues, and nations.

And all that dwell upon the earth shall worship him, whose names are not written in the book of life of the Lamb slain from the foundation of the world. If any man have an ear, let him hear. He that leadeth into captivity shall go into captivity: he that killeth with the sword must be killed with the sword. Here is the patience and the faith of the saints.

And I beheld another beast coming up out of the earth; and he had two horns like a lamb, and he spake as a dragon. And he exerciseth all the power of the first beast before him, and causeth the earth and them which dwell therein to worship the first beast, whose deadly wound was healed. And he doeth great wonders, so that he maketh fire come down from heaven on the earth in the sight of men, And deceiveth them that dwell on the earth by the means of those miracles which he had power to do in the sight of the beast; saying to them that dwell on the earth, that they should make an image to the beast, which had the wound by a sword, and did live. And he had power to give life unto the image of the beast, that the image of the beast should both speak, and cause that as many as would not worship the image of the beast should be killed.

I believe it is possible that some of what John saw in chapter 13 is directly connected to what AI can produce. The very fact that the second beast “deceiveth them that dwell on the earth” could very well indicate that people are deluded into believing that what AI is creating is real. We are living in the most dangerous time in all human history. I implore you to press into God like never before. Pray, worship, meditate in scripture, and spend time with the Holy Spirit who will guide you into all truth. We absolutely must become highly discerning spiritually to differentiate between what is and is not of God. Our eternal destination depends on it.

In His Grace,

Jim
